

QUESTION,C,65

ANSWER,M

Why does my report or letter print question marks?  
 Why does the memo field split words instead of wrapping them?  
 How do I know which report works with which database?  
 Why am I getting "Waiting on resource" message on my database?  
 Does PC-File recognize expanded memory?  
 Why isn't PC-File printing to my LaserJet printer?  
 How do I suppress relational lookup trailing spaces in a report?  
 How do I know which field(s) to index?  
 Why is PC-File giving the error "End of file"?  
 Why is PC-File giving the error "Invalid field number/name"?  
 Why won't PC-File let me build an index?  
 Why do I get the error message "Invalid file slot number"?  
 When I change a field name, it isn't changed on the screen. Why?  
 Why doesn't PC-File show me record numbers?  
 How do I change PCLABEL's colors for my monochrome monitor?  
 How do I tell PCLABEL which index to use?  
 Why do graphs print ok on a Postscript printer but reports don't?  
 Why does data in some fields change when I press M to modify?  
 How do I add additional screens to my database?  
 How do I rebuild an index?  
 Why does PC-File say there are more records than it shows?  
 What are memo fields and how do I use them?  
 How do I print memo fields?  
 My report isn't spacing correctly from one page to the next. Why?  
 My report is printing on the perforation. Why?  
 Numeric data on my report is not right justified. Why?  
 Some characters in my fields aren't printed correctly. Why?  
 How do I draw boxes on my entry screen in PC-File?  
 How do I create multi-level indexes in PC-File?  
 Why am I getting "Insufficient memory" messages?  
 Do I need a different version of PC-File to run on a network?  
 How do I use relational lookups?  
 Sometimes when I search, my records are in a random order. Why?  
 My reports aren't printed condensed when I request. Why?  
 I have a color monitor, but graphs are in black & white. Why?  
 PC-File doesn't display the graph on my screen. Why?  
 Can I change the legend displayed on the graph?  
 Can I change the scale PC-File uses for my graph?  
 My graphs don't print correctly. What can I do?  
 Can calculations include IF, THEN statements?  
 Can Global Modify insert data (not overwrite data) in a field?  
 I keep getting "WARNING: Bad index ...". Why?  
 How do I print all of the data in a window field?  
 How do I configure PC-File for two printers?  
 If I don't index a field, can I still search it?  
 My relational calculations aren't working. What am I doing wrong?  
 When I print a report, data is not lined up in columns. Why?  
 Nothing prints on the report, or only the headings print. Why?

## Sheet1

Can I search for data in memo fields?

Why does the heading of my report only print on the first page?

Sometimes PC-File switches indexes when I search. Why?

Can I write programs to access my PC-File data?

Do you have additional information available on PC-File?

Why do I get "Unsuccessful Add" or "Error during Modify" errors?

How do I make my phone dial using tones instead of pulses?

Why does PC-File change some of my field names?

PC-File thinks I have duplicate field names when I don't. Why?
