

## Ready to install First Train

The First Train for the Internet Day Excursion (freeware) package is now prepared for installation. Before continuing, we'd like to alert you to the following precautions.

**1.** It is recommended that you use the default installation path for First Train for the Internet (C:\FIRSTRN). Installing to our recommended directory will insure the proper function of all existing and planned upgrade modules to First Train, and save space on any future installations if you install all modules to the same directory.

(By the way, if you don't know what "default path" means, accept the suggested installation parameters as shown on the setup screens. It should make life a touch easier.)

**2.** If you use an uninstall utility which is designed to track your software installations, run it now so that it can track First Train's installation, and *abort the installation of the optional uninstall utility included with this package*. This will insure a much cleaner removal of the software if you should ever need to remove it. (Remember, first and foremost this is training software. Most users outgrow it.) A dedicated uninstall program will do a more thorough job than the included utility.

welcomebb

## Installation cleanup

There may be some cleanup work left to do before completing this installation. If you did *not* change the default pre-installation directory from C:\**FIRSTRN** when you ran the supplied .EXE file, you have a directory containing about 3Mb of data you don't need any more. If you're a hacker, you might want to take a peek at this data. If you're not, you may as well erase it now. It's just taking up space.

You can start the software at any time by double-clicking on the **First Train Day Excursion** icon in your PC-Internet Lexicon program group. If you received your software electronically and you want to save the original files to floppy disk, you will need to know how to break up the software in order to do this. The original archive containing First Train will not fit on a single floppy disk.

Erase the leftover data and continue

Keep the leftover data and continue

erase

keep

## Uninstall First Train Day Excursion

This procedure will erase all of the files included with your First Train for the Internet Day Excursion (freeware) package.

### ***Please take careful note of the following cautions:***

1. Once the procedure has been completed, you will be returned to Windows without warning. This program momentarily drops to the DOS level to erase the files, and you may see your screen flash momentarily while this is taking place. Ignore any error messages; they are part of a checking routine for leftover files.

2. You will have to erase icons, shortcuts and program groups manually. If you used an uninstall utility to track the installation of this software, it is recommended that you use the same utility to remove it. A dedicated uninstall utility will do a more thorough job than this simple space-saver routine.

### ***Select one of the following:***

**Remove the First Train software**

**Bail out...don't remove the software**

***Are you sure?***

**Yes, remove the software**

**No, bail out of the uninstallation**

## ***Uninstallation aborted.***
