

WebTicker[™] Help

The purpose of *WebTicker*[™] is to transparently display HTML files containing information such as News Headlines, Sports Scores or Stock Prices in a simple, unobtrusive manner.

Links to sample files are included with the program, so there's nothing to setup. If you prefer, you can override these settings with files of your own choosing.

WebTicker[™] will then update the files at timed intervals whenever you are logged-on to the Internet.

*WebTicker*TM Program Settings

The Program Settings dialog contains four tabs:

The "Files" tab enables you to choose which files are downloaded from the Internet and displayed on the Ticker. When you add a new file, be sure to enter the complete URL (i.e. <http://espnet.sportszone.com/mlb/index.html>). If any part of the URL is missing, *WebTicker*TM might not be able to download the file correctly.

The "Program Settings" tab allows you to decide how often to update the files displayed on the ticker and to customize the Ticker itself. You can change the text font and scrolling speed.

The "Registration" tab allows you to view the Registration form and to register *WebTicker*TM.

The "About" tab displays information about *WebTicker*TM.

WebTicker's "VCR" Controls

These buttons control the scrolling of the Ticker.

Causes the Ticker to start and stop scrolling.

Instructs the Ticker to load a different HTML file. See [Changing Program Settings](#) for tips on how to edit the file list.

Unloads *WebTicker*TM.

Registering *WebTicker*[™]

WebTicker[™] is fully functional for 10 days. After this evaluation period, the program's download feature will expire. From the "Registration" tab on the Program Settings dialog, you can view and print the registration form. Once you register *WebTicker*[™], you will receive a Registration Code. Once you enter the code, you're registered and the program's downloading feature will be restored.
