## Specular LogoMotion™ 2.0.1 DEMO Information

\*\*\*\*\*

### System Requirements:

Specular LogoMotion requires a color Macintosh; at least 5 MBs of available RAM; a 68k-based computer with a Floating Point Unit (math coprocessor) or a Power Macintosh; System 7.0 or later; and QuickTime 1.6.1 or later. Adobe Type Manager 2.0 or later is required to use Type 1 Postscript fonts.

### The Limitations of this Demo Version:

- **Fixed Camera Window Size.** This demo will not allow you to make the camera window larger than 320x240. Normally this camera window can be set to any size.
- **Disabled Save and Save As.** This demo gives you the control to create as complex of scene as you desire, but since both these save options are remove you can not return to these scenes after you quit out of LogoMotion.
- **Limited Animation Rendering.** Only the first 30 frames of an animation can be rendered out per session. To render another 30 frames, you will need to quit and restart the program.
- **Disabled Export to Infini-D and Export to StageHands.** The full version of LogoMotion allows you to export your scenes as an Infini-D file to take advantage of those powerful features in Specular's high-end 3D animation package.
- **Print Option Disabled.**
- **Drag & Drop Disabled.** The full version of LogoMotion allows you to Drag & Drop PICT images both into and from the camera window. While this demo allows you to drag PICT images into LogoMotion (for use as texture maps on 3D objects and background images), the ability to drag images from LogoMotion has been removed.

### For More Information:

Are you interested in finding out more about LogoMotion or any of Specular's other products? If so, you can contact Specular's Inside Sales Team by calling (800) 433-7732. in the U.S. and Canada or (413) 253-3100 for International callers. Our knowledgeable representatives will be able to answer those questions that you might have and even send or fax you more information.
