Thank you for downloading Microsoft® Internet Mail and News 3.0.

Internet Mail and News lets you communicate with others on the Internet through electronic mail and newsgroups. Electronic mail, or e-mail, lets you exchange messages and files with other people on the Internet. Internet newsgroups consist of messages by individuals, organized by topic. You can take part by posting a message of your own, responding to a message, or sending an e-mail message directly to the author of a message.

If you love or hate something in the product, send us mail (just reply to the Reporting Bugs/Suggestions message). We will try to respond to as many messages as we can.

Thanks again,
The Internet Mail and News for Macinosh Team
