You can place a line, text, picture or rectangle anywhere on your layout by using the Layout Menu or the appropriate picture button.

Create rolodex cards, business cards and mailing labels by selecting the "List Files of Type" box on the File Open dialog box.

You can move any object on your layout by single-clicking on it and while holding down the mouse button, move the object to the new location.

To edit any object, (picture, text, line or rectangle), simply double-click on it. Depending on which object type you have selected, the appropriate edit options will be available.

You can use any windows bitmap image on your computer, no matter where it is located on your computer. When placing a picture on your layout, you can choose the image from the file menu or the picture menu.

Use the Windows paint programs in either Windows 3.1 or Windows 95 to edit or create bitmap images for use with this program.

When adjusting your print margins (Layout Menu), you have 300 calibration units per inch, allowing pin-point adjustment accuracy.

The calibration ruler (Layout Menu) allows you to print a visual representation of your printer allowing you to "measure" your margins.

You can change all the fonts in a layout at the same time by using the "Change all fonts" option on the Layout Menu!

If you need to adjust the top or right print margins, see the "Page Layout" option on the Layout menu. This allows you to move the margins in or out by a specified amount.

You can turn on the layout grid using the Options Menu. This allows you to "see" where you can move objects to and where they cannot.

You can connect your layout files directly to any Dbase-compatible file and have the information in the database printed on your layout.

You can use ANY font on your computer when creating design layouts. Simply double-click on the text line and select the font you want.

You can change the size of a line or rectangle simply by double-clicking on it!

Use the Backup Files option on the Files Menu to safeguard your layout files in the event of hardware failure. You can always restore your files from the backup.

You can print one, two or many cards and labels by using the selection options when printing layout files.

Answers to the most frequent asked questions can be found on the Help Menu. There may be answers to your questions in the help file.

If you are connected to external database files, you can use the record queue to select various records for printing or you can save the record queue for later use.

This program can print images in color or black and white. Both type of printers are supported!

You can use the Database Manager to view, sort and create database files. Once created, you can use this information within your layout files.
