

Upgrading To DayMaster for Windows From Unregistered/Previous Versions 2.00 & Later:

To prevent loss of any data do the following:

1. Run the SETUP.EXE from the floppy disk containing DayMaster for Windows, installing it to the same sub directory your program is currently installed in..
2. During the extraction process, allow the program to overwrite your older files, these are the most current stock library and program files and will not effect any data you have entered.
3. All old library files will be upgraded automatically, and you will be prompted for the registered user's name..

Upgrading To DayMaster for Windows From DOS Versions:

There is NO compatability for DOS versions prior to 5.00.
