Installation of the SoftF/X Demo software

Windows 95 and Windows NT

Run the SETUP.EXE file in the **Disk1** subdirectory located in the **SoftFX** directory.

Windows 3.1 or Windows for Workgroups

If you already have installed Win32s v1.25 or greater in your Windows 3.1 or Windows for Workgroups 3.11 system, run the SETUP.EXE file in the **Disk1** subdirectory which is located in the **SoftFX** directory.

IMPORTANT**:** This program was developed for Windows NT, and is a true 32-bit application. It is therefore necessary that Microsoft's Win32s subsystem be installed before trying to run the program under Windows 3.1 or Windows for Workgroups. To do this, run the SETUP.EXE file found in the **Win32s** directory. This Setup program will test your system to see if you need Win32s. You will also have the option of installing Freecell, a 32-bit card game.

Video for Windows

If you are using Windows 3.1, you should install the Video for Windows kit. Change to the **VFW** directory and find the SETUP.EXE file. Double-click this to start the Video for Windows runtime software from Microsoft. After it is successfully installed, you should be able to double-click on any AVI file and it will automatically play.

If you are using Windows 95 or NT, installation of Video for Windows is not necessary since Video for Windows come already installed with these systems.
