

Soundex Cross Reference

Compiled in DOC format by Douglas B. McKay

The National Queries Forum, 1990-1993

Like the Surname List, this cross reference was created by the computer. It was sorted by Soundex Code and includes all surnames found in NQF numbers 1-36.

The Soundex coding system is an attempt to code names phonetically. Using this method, like-sounding names will have the same code. This is very useful to genealogists as any particular name can have dozens of variant spellings. For instance, all of these are coded as P330: PETTIT, PETETT, PETIT and POTEETE.

Be aware, though, that names found under any particular code are not necessarily all related to one another. For instance, BALUSKA and BAYLES are both coded as B420 but probably have nothing more in common. By the same token, you will likely find additional variant spellings of a name in more than one Soundex grouping.

Nevertheless, this method, which is used by the National Archives, will simplify your cross-referencing.

Following are the instructions needed to code a surname.

Soundex Code Groupings 1) b, p, f, v 2) c, s, k, g, j, q, x, z 3) d, t 4) l 5) m, n 6) r

All Soundex Codes begin with a letter, followed by three numbers.

STEP A Do not code the first letter. Use it AS-IS. The Soundex code for ADDISON begins with "A"

STEP B Successive consonants belonging to the same group (see above) are coded as one letter. ADDISON becomes ADISON. Usually, surname prefixes, as VON in VON SCHULTZ, are ignored.

STEP C With the exception of the first letter, which is not coded, eliminate all vowels and the letters h, w & y. ADISON becomes ADSN

STEP C Skipping the first letter, code the next three letters according to the Soundex Code Groupings (above). If there are fewer than 3 numbers, fill in the remaining places with 0's. ADSN becomes A325

Included below are SOUNDEX codes for many common surnames. You may use the Find function to locate either a surname or a SOUNDEX code.
