C++ Message Box Help

This file contains the help for the C++ Message Box sample application.

C++ Message Box Sample - Message Box Help

This is the help panel for helpId=100. The message box help button is connected to this help panel by the following steps within the AMsgBoxDemo class implementation in the msgbox.cpp file:

- The message box and help window are owned by the same frame window.
- The IHelpWindow::addLibraries function is used to identify the appropriate help library file, msgbox.hlp.
- The helpId, 100, is specified, using a symbolic definition, on the message box show function.
