The MPG-Net Systems Access Software is the user interface for the MPG-Net games. But the System Access Software (SAS) is more than that. It is also an online interactive system where you can create an online persona, communicate with other players, and send e-mail. You can also download games, manuals and updates from the library and more.

Select the install button below to install the MPG-Net System Access Software.

Please be aware that when the System Access Software is being installed it may run in the background.   To check on it's progress please press Alt+Tab.
