

To play the Simutronics games you will need to install the Simutronics launcher. This launcher will work with both Netscape 3+ and Internet Explorer 3+ web browsers.

The launcher will determine whether you have all of the software necessary to play each game. If you do not, it will automatically download and install the latest version.

Don't forget that the other software needed to run the games is also included on this CD; click on the game items to the left for more information.
