

Windows 95 Demonstration ReadMe File

This file contains information you need to know before running the demonstration of Microsoft Windows 95. You may want to print this file to refer to before you run the demo.

Configuration Notes

For optimal performance, please make sure your system conforms to the following guidelines:

Screen Savers

Please disable all screen savers. The Windows 95 Demo will run better when screen savers are not active.

Running Other Applications

Please close all other applications. The demo runs best when no other applications are open. Also, do not switch tasks when running the demo using Alt-Tab or the Task Manager. Exit the demo using the 'Exit' button before switching to another application.

Monitor Settings

We recommend setting the monitor to 256 colors. The demo will not operate properly with other color settings.

Video Cards

Macromedia Director, used to build this demo, requires video software drivers and hardware that fully support Windows 3.1 standards. The following video systems have been tested and found to be compatible with Director during authoring and playback. We recommend installing the latest available video ROM and software. Contact the video card manufacturer for information.

Authoring and playback are not limited to these systems. If you experience difficulties with a card that is not on this list, first test it at 640 x 480 resolution with the monitor's color depth set to 8 bit (256 colors). Next, contact the hardware manufacturer to find out if the problem has been addressed with an updated driver.

The following cards have been tested and provide acceptable results for authoring and playback:

Video card	Bus Type	Driver Date	Rev	Notes
ATI Graphics Wonder	VLB	3/19/93	2.3	
ATI Graphics Xpression	VLB	6/13/94	1.1	Note 1

Note 1: Driver version 1.53 sometimes freezes when playing certain Director transitions. Driver version 1.42 is recommended.

Note 2: Does not always properly display QuickTime digital video in 16-bit (thousands) and 24-bit (millions).

Note 3: Does not draw extremely wide arcs properly.

Note 4: Sound break-up or distortion may occur during complex transitions.

Note 5: The cursor sometimes disappears when using a large virtual desktop.

Note 6: Video snow appears during some palette transitions.

Sound Cards

The following sound cards have been tested and are compatible with Director:

Sound Card	Notes and comments
------------	--------------------

Compaq Business Audio	
Creative Labs SoundBlaster	
Creative Labs SoundBlaster Pro	
Creative Labs SoundBlaster 16	
Creative Labs SoundBlaster AWE32	
Gateway 2000	
IBM M-Audio *	
MediaVision ProAudio Spectrum	
MediaVision ProAudio Spectrum 16	
MediaVision ProAudio Spectrum 16 Pro	
Microsoft Windows SoundSystem Version 1	
Microsoft Windows SoundSystem Version 2	
Orchid SoundWave 32	
Reveal Forte 16	
Roland Rap-10	

* IBM computers that have the M-Audio sound card should use driver version 1.3 or higher for best results. Older versions of this driver don't play all sounds in Director or AVI movies. The version 1.3 driver did not pass the 16-bit sounds test for Director. Testing revealed that 8-bit sounds are corrupted when played after a 16-bit sound. At the time these release notes were written, version 1.3 (dated 1/10/94) was the most recent driver available from IBM.
