

Preview location chooser window

Here you select the page in which you will display the applet. The first item in the list is always 'blank page'. Note that you have to paste the applet HTML code the first time in your own page if you want to get a preview directly in this page, otherwise Easy Applet Builder is not able to place the code in the file.

Add...: Browse and choose a web file (.html or .htm) to add it in the list.

Remove: Remove a location from the list.
