MenuPopUp

This applet displays a popup menu, like the classic right click popup menu.

The location where the popup appears :   The popup can appear at random on the applet area, centered in this area, or where the mouse pointer enters.

When does the popup open ? :   The popup can be displayed when the visitor clicks on the applet area, or when the mouse pointer is over the applet area.

Text display :   A text can be displayed centered on the applet area. Set the text, the **text height** and **color**.

Target :   You have 4 defined choices ('_self', '_blank', '_top', '_parent', for instance select '_self' to open the linked page in the same window or '_blank' to open it in a new window; see the Help for further details). If you use frames you can select 'frame_name' and enter the destination frame name instead of   'frame_name'.

Add/Remove :   Set the MenuPopUp **texts** and **links**. Each text is associated with one link. For instance enter 'Altavista' as a text and 'http://www.altavista.com' as a link. The link you enter must be an URL (Web address). It can be an absolute URL, like 'http://www.taijisofware.com', or a relative one like a page name from your site, 'home.html' for instance. Then click **Add** to add these text and link. Add other texts and links. If you want to remove a text/link, select it and click **Remove**.
