

STEREO Custom Controls

The STEREO Custom Controls ([TStereoButton](#) and [TStereoSpeaker](#)) are part of the User-Installabel help demo. For more information, see USERHELP.WRI, located in \DELPHI\DEMOS\USERHELP.

TStereoButton

The TStereoButton class is a push button which provides a two-state switch (on/off) by displaying a light indicating which state the button is in.

[OffColor property](#)

TStereoSpeaker

Perhaps the most useless control yet designed, the TStereoSpeaker control simply plays a Wave file when clicked.

See also:

[WaveFile property](#)

IsOn property

property IsOn: Boolean;

The IsOn property is used to query or set the state of [TStereoButton](#). When this property is True the button light is drawn using [OnColor](#), and when IsOn is False, the light is drawn using [OffColor](#).

See also:

[OnColor property](#)

[OffColor property](#)

OnColor property

The OnColor property contains the color used to draw the TStereoButton light when its IsOn property is True.

OffColor property

The OffColor property contains the color used to draw the TStereoButton light when its IsOn property is False.

WaveFile property

This property defines the filename for the TStereoSpeaker.
