

Exciting Supplement Editing in Wordworth

A new phenomenon is upon us. Yes! Now you can create Supplements for use in Digita Organiser within Digita's new word processing package, Wordworth for Windows. By using a special Organiser Supplement template in Wordworth you have access to the standard style sheets for creating Supplements for Organiser.

How to create a Supplement

Just create your Supplement by typing the text in using the styles in the style sheet popup. When you have finished editing the text use Save As... to save the document as a .Sup Organiser Supplement file in one of the directories in the Organiser 'Supplements' directory. Then run Organiser and see your Supplement in action!
