COMMAND,CDESC,C,60
QUIT   lease PC-Info
IN(reads a character from a sequential file
USE   opens a data file for use
READ(reads a line of a sequential file
GET(reads a string from a file
SCREen   saves and restores screen images in memory
RANK(ASCII code for a character
ASC(ASCII code of a character
CANCel   quits current program but stays in PC-Info
CHAIn   quits current program and jump to do another
READ   enter editing of @ GET and TEXT commands
DELAY   pause for a predetermined time
INKEY(waits for and reports on a keystroke
INPUt   waits for data to be keyed in
PRINTER(tests for printer on-line
SKIP   moves forward or backward through a data file
EJECt   sends from feed to a printer
BIT(reads individual bits
LEN(gives length of a string
AT(gives location of a substing inside a string
SAVE   saves memory variables to a file
?   start new line and print
ENDIf   close of IF-ENDIF structure
ENDCase   close of a DO CASE structure
ENDDo   close of a DO WHILE loop
PROCedure a set of commands
??   print on current line
CLOSe   close one or all data files
FLUSh   write out file to disk - with header updated
COUNt   count records in file that meet specified conditions
BOX   draws rectangular boxes
ROPEN(opens sequential file to read
WOPEN(opens sequential file to write
DIRFiles   scans sub-directories following the FILES structure
GOTO   jumps to a record specified by number
LIMIt   sets active range of indexed data file
DIR   similar to DOS dir
GO   same as GOTO
SCOPe   same as LIMIT command
BROWse   look at a screenful ofrecords in a data file
*   used at beginning of line to indicate a comment
TEST(validate expression
WRITe   activates the PC-Info editor
DISPlay   displays a wide variety of information - see documentation
STATus   displays current status of system
REMArk   displays message on screen or printer
RING   produces a sound - same a printing an ASCII 7
MENU(user chooses by moving light bar

INT(extracts integer part of a number - does not round up
record number
MODIfy   add, delete, or change fields of a data file
ACCEpt   provides a prompt and waits for input
DO   includes code from other .PRG files during compilation
HELP   provides help on line
LTRIM(remove leading blanks
DELEte   remove one or more records from a data file (reversible)
TRIM(remove trailing blanks
RENAme   renames a file
REMLIB(removes a library entry
ZAP   deletes all records in a file
REPLace   updates fields of a data file
UPDAte   revises fields in current file based another indexed file
RECAll   undeletes deleted (but not packed) records
ENDProc   end of a procedure - control passed to calling code
EOF(end-of-file status for open data files
WINDow   specifies active region of the screen
FIELd   specifies field inside an ON FIELD structure
SET   many forms - see documentation
STR(string representation of a number
@(search a string and report location of match
FIND   search data file according to index and key - sets :NEAR
ELSE   branch of an IF - ENDIF structure
LOCAte   searches on a conditions without requiring INDEX
FILE(verifies existence of a file
*   true if current recoird of selected data file is deleted
DELETED(true if current record is deleted
RESET(sets individual bits to 0
SET(sets individual bits to 1
IFF(one-line condition with two possible outputs
@   positions cursor to SAY or GET
OTHErwise   do this part if no CASE is satisfied in DO CASE structure
REPLACE(substitutes all occurences of a string with another
REINdex   rebuilds an index file
COMPile   compiles a .PRG file to prduce a .CPL file
FLD(details on any one field in a file
SCROll   scrolls the contents of the current window
WAIT   system waits for keystroke from use
LIST   list many kinds of information - see documentation
DBF(information about open data file and its indexes
NOTE   a comment line
SELEct   determines the current default data file
IF   commands which follow will be done if condition is true
PACK   permanently remove deleted record from a data file
EDIT   exmaines some or all fields of a single record
APPEnd   adds new records to a data file - many variations
=   assignment (may also appear in a condition as comparison)
EOF   returns true if current record is end of file

EOF	returns true if current record is end of file
RECNO(	current record number for open data files
CONTinue	continues to locate from the current record
FIELD(	gets number assigned to field in a GET table
FILEs	see documentation of FILES...ENDFILES structure
CASE	part of DO CASE structure
SEEK(	set position in a sequential file by character
SSEEK(	set position in a sequential file by line
$(	pick out part of a string
SUBSTR(	pick out part of a string
COL(	X coordinate of cursor
ROW(	X coordinate of cursor
VARIable	declare memory variable that follow
DIMEnsion	declares matrix or array of memory variables
RELEase	gets rid of selected memory variables
LEFT(	substring from left
RIGHT(	substring from right
INSERT(	overwrites a string with another from a starting position
TOTAl	summarizes selected file to a new file
CEN(	centers a string
!(	convert a string to upper case
LOWER(	convert a string to lower case
CHR(	converts ASCII value to character
UPPER(	converts to upper case
BREAk	interrupts a loop
COLOr	colors a block on screen - can also fill the block
OUT(	writes a character to a sequential file
SORT	copies a file to a new file in specified order
WRITE(	writes a line to a sequential file
REPEat	starts a loop to be executed a specified number of times
CREAte	builds a new data file
REPOrt	builds a report using a .FRM file
CLOSE(	closes a sequential file
PUT(	writes a string to a file
STORe	copies a value to a variable
CLEAr	closes all open data files and deletes all memory variables
INDEx	builds an index file for the current active data file
ERASe	clears current widow or entire screen
GLOBal	causes memory variable to survive CHAINing
SUM	totals numeric fields for selected record
SPOOl	spools printout to a holding file and from there to printer
CLS	clears screen
TEXT	begins to present text information to screen or printer
WRAP(	forces word-wrapping
POST	post selected records from one file to another
RESTore	re-installs memory variables from a files
BLANK(	sets string to blank or fill character
NOUPdate	do not save changes to current record
RUN	executes DOS commands

AVERage   computes average of numeric fields for selected records
DAYS(computes interval between two dates, or date after interval
MONTHS(computes months between two dates, or date after interval
VAL(computes value of a numeric string
CURSor   move the cursor to a position on the screen
PERForm   jump to a procedure
RETUrn   back to calling .PRG from a DO
LOOP   jump to the top of a loop
DIR(directory information one file at a time
LOC(reports byte position in a sequential file
SPACE(reports memory remaining in work and data space
PIC(formats output of numbers and strings
TIME(reports time
TYPE(reports type for a variable
ENDDo   concluding statement of DO WHILE loop
ENDRepeat   conclusion of REPEAT loop
COPY   many variations - see documentation
ON   wide variety of uses - see documentation
DATE(wide variety of date functions - see documentation
