

## Visual Basic Listbox Controls

(c)1992 by Mark Gamber

This control provides two new controls to Visual Basic, those being a multiple selection file listbox and a multiple column, multiple selection listbox. To begin using the controls, copy **VBMFILE.VBX** to your Visual Basic directory. Select "Add File..." from the "File" menu and select the file from the listbox displayed. If successful, two new icons should appear on the toolbar.

### Properties:

Archive: TRUE enables display of files with the "Archive" bit set, FALSE disables the display.

CellWidth: Multiple column only, this sets the pixel width of each filename cell.

Path: Sets or gets the path currently used by the control.

Pattern: Sets or gets the file mask currently in use by the control.

ReadOnly: True enables display of Read-Only files, FALSE disables the display.

System: TRUE enables display of system files, FALSE disables the display.

Version: Returns the control version. 100 is version 1.00, for example.

### Methods:

List(index): Gets the filename for a specified listbox item.

ListCount: Gets the number of filenames in a listbox.

ListIndex(Index): Sets or gets the select state of a listbox item.
