Life

Something you have when you are not programming computers.

Visual Basic Project

A Project is selected by choosing its Visual Basic MAK file.

Example

[See Also](#)

Here's an example of how The Code Arranger makes your code easier to read:

Before The Code Arranger:

```
do
for x%=1 to SomeNumber%
if x%<= SomeOtherNumber% then
y%=x%+3
end if
next x%
loop
```

After The Code Arranger:

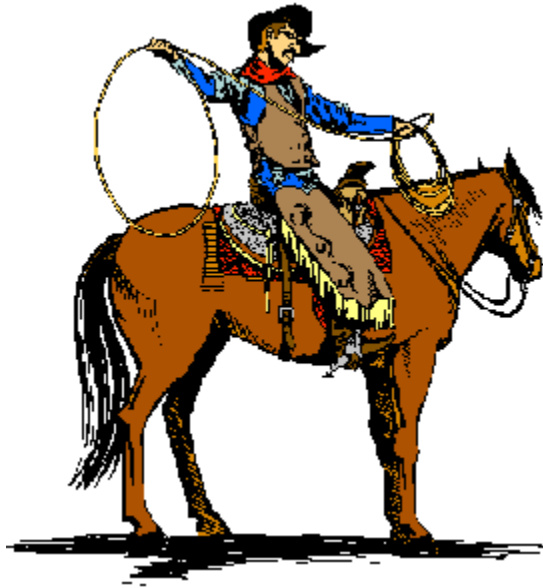

```
Do
  For x%=1 to SomeNumber%
    If x%<= SomeOtherNumber%
      Then
        y%=x%+3
      End If
    Next x%
  Loop
```

Procedures

[See Also](#)

- Click on **Project** to select the [Visual Basic Project](#) that you wish to arrange.
- Click on **Files** to select the specific files that you wish to arrange. If you wish to arrange all appropriate files in the project, you may skip this step. Be certain that each file that you want The Code Arranger to process has been saved as text. If you select a file that has not been saved as text, The Code Arranger will not process it and appropriate mention will be made in the [log](#).
- Click on **Process** to put The Code Arranger to work!

When The Code Arranger has completed processing the project, you will have option of viewing the log which includes every detail of the processing.

Fax: (512) 453-3757

Options

[See Also](#)

Make Backups:	If checked, The Code Arranger will make backups of all files before they are processed. The backup files' names are indicated in the log .
Progress Indicator:	If checked, a progress indicator thermometer will be displayed while The Code Arranger processed. If not checked, the name of file being processed will be displayed. Processing is fastest when this option is not checked.
Remove REM Statements:	If checked, all remarks (indicated by ' or REM) will be removed from the code.
Share Processor:	If checked, The Code Arranger will allow you to work on other programs while processing. If not checked, you will not be able to work on other programs, but the processing will be faster.
Indent:	Indicates how many blank spaces will be inserted before the code. Allowable values: 0-50.
Line Spacing:	<u>As is:</u> The line spacing in the code will not be changed. <u>Single:</u> All blank lines will be removed from the code. <u>Double:</u> 1 blank line will be placed between each line of code. <u>Triple:</u> Two blank lines will be placed between each line of code.

Log

The Code Arranger maintains a log of all processing. The log is an ASCII text file called TCA.LOG. It is located in the WINDOWS subdirectory. You may view TCA.LOG through The Code Arranger or with any word processor that can import ASCII text files.

See Also

[Extensions](#)

Extensions

[See Also](#)

You may indicate which file extensions you want The Code Arranger to process. The default extensions are BAS, FRM, INC, and TXT. The Code Arranger will only consider processing files with these extensions. Any files with other extensions (VBX and DLL, for example) will not be processed. If you have created some other code file with another extension (perhaps ASC), add it and The Code Arranger will process the files with that extension.
