

Crystal Reports Technical Document

Subject: Using PEGSetSelectionFormula with Object Vision
Date: January 16, 2025
Versions: VB

Situation: User has difficulty with assigning a record select statement.

Solution:

If its a string that you are passing in the variable, it should look like this:

```
@ASSIGN(Job,@PEOpenPrintJob("reportname"))
@ASSIGN(Recselect,"{file.field} = ' "&OV_Variable&" ' ")
@PEGSetSelectionFormula(Job,Recselect)
@PEOutputToWindow(Job,"Print check listing",1,20,630,450,0,0)
@PEStartPrintJob(Job,1)
@PEClosePrintJob(Job)
```

If it's a number that you are passing in the variable, it should look like this:

```
@ASSIGN(Job,@PEOpenPrintJob("reportname"))
@ASSIGN(Recselect,"{file.field} = "&OV_Variable)
@PEGSetSelectionFormula(Job,Recselect)
@PEOutputToWindow(Job,"Print check listing",1,20,630,450,0,0)
@PEStartPrintJob(Job,1)
@PEClosePrintJob(Job)
```

Remarks:

Watch your quotation marks.
