Subject: General Protection Fault in Grand Total
Date: August 5, 1993
Versions: 2.0 for VB, 2.0 Professional
Category: GPF in Grand Total

Description:

A report will consistently GPF if you perform the following steps:

1. Create a subtotal
2. Create a Grand Total on same field
3. Remove the Grand Total field
4. Drag your Subtotal field into the Grand Total section
5. Attempt to use the Grand Total in a formula.

NOTE: If you do not attempt to use the grand total field in a formula all is well and the report will print correctly.

To fix the problem remove the grand total field then recreate the Grand Total freshly (ie: don't drag the subtotal field into the Grand Total).

Remarks:

This will be fixed in Version 3.
