

About the Crystal Reports Samples

Code

The *Code* folder contains code samples to help you integrate features of Crystal Reports into your custom applications. There are code samples here for a number of different programming languages.

Databases

The *Databases* folder contains the data sources from which our sample reports and code samples are created. These include a Microsoft® Access database (*xtreme.mdb*), a Microsoft® Excel file (*Xtreme.xls*), and a set of OLAP data.

Reports

The *Reports* folder contains nearly 40 sample reports that showcase a wide range of Crystal Reports features. The reports also demonstrate how organizations can use Crystal Reports to address common business issues.

Where can you get more samples?

Get more samples from the Crystal Decisions Support Site:
