

# Wizard Manager

{ewc HLP95EN.DLL,DYNALINK,"See Also":"vbproBooksOnlineJumpTopic;vbwizWizardMgrC"}

A tool in the Visual Basic environment that assists you in the creation of custom wizards that look and act like those that ship with Visual Basic. The Wizard Manager manages the screens of a wizard while it is in the development stage. The utility provides the initial framework for a wizard type of add-in and the ability to add, change, and delete screens from the wizard.

You can create Wizards on your own to look any way you like, but the Wizard Manager is a great tool for managing your wizard creation efforts and for giving your wizards a look similar to those used by Microsoft and other vendors.

## Wizard Options

 **Move Step Button** When selected, the Wizard Manager moves the currently visible step out of the visible screen frame. This is usually the last task you perform after you've completed the creation of a Wizard. Otherwise, the last step you were working on remains visible in the frame.

For example, if the **Finished!** step is visible when you save the Wizard, and you don't click the Move Step button, the **Finished!** step will show when the Wizard is started.

 **Add New Step Button** When selected, the Wizard Manager adds a new step to the end of the list before the **Finished!** step.

 **Insert Step Button** When selected, the Wizard Manager creates a new step before the currently selected step. If no step is currently selected, the button does nothing.

 **Move Step Up One Position Button** When selected, the Wizard Manager moves the selected step up one position from its current position in the list. If no step is currently selected, the button does nothing.

 **Move Step Down One Position Button** When selected, the Wizard Manager moves the selected step down one position from its current position in the list. If no step is currently selected, the button does nothing.

 **Refresh Step List Button** When selected, the list of steps is refreshed to reflect any changes made to it.

# Wizard Manager Shortcut Menu

## Move All OffScreen

When selected, the Wizard Manager moves the currently visible step out of the visible screen frame. This is usually the last task you perform after you've completed the creation of a Wizard. Otherwise, the last step you were working on remains visible in the frame.

For example, if the **Finished!** step is visible when you save the Wizard, and you don't click the Move Step button, the **Finished!** step will show when the Wizard is started.

Toolbar button: 

## Add

When selected, the Wizard Manager adds a new step to the end of the list before the **Finished!** step.

Toolbar button: 

## Insert

When selected, the Wizard Manager creates a new step before the currently selected step. If no step is currently selected, the button does nothing.

Toolbar button: 

## Delete

Deletes the currently selected step from the Wizard Manager. You can also use the DELETE key.

Toolbar button: None

## Move Up

When selected, the Wizard Manager moves the selected step up one position from its current position in the list. If no step is currently selected, the button does nothing.

Toolbar button: 

## Move Down

When selected, the Wizard Manager moves the selected step down one position from its current position in the list. If no step is currently selected, the button does nothing.

Toolbar button: 

## Edit Name

When selected, allows you to edit the name of the currently selected step.

Toolbar button: None

## Refresh

When selected, the list of steps is refreshed to reflect any changes made to it.

Toolbar button: 

## New Wizard

When selected, a new Wizard is created from the Wizard template.

Toolbar button: None

### **Help**

When selected, invokes Help on this topic.

Toolbar button: None

### **Show Toolbar**

(Toggle) When checked, the Wizard Manager toolbar is displayed. When unchecked, the toolbar is hidden.

Toolbar button: None

### **Close WizMan**

When selected, the Wizard Manager closes. Another way to do this if the Wizard is an add-in is to clear the Wizard Manager's check box in the Add-In Manager dialog box. If it's not an add-in, you can select the Close button.

Toolbar button: None
