Welcome to Visual Help, the Windows WYSIWYG help authoring system.

Microsoft Windows has become one of the most popular working environments for personal computers today, due in large part to its ease of use. One particular feature that contributes to Window's user friendliness is its on-line help. On-line help provides quick and easy access to information about the features and operation of Windows applications. On-line help systems add professional polish to software programs and make them easier to use. Visual Help is a powerful, easy-to-use development environment that you can use for creating Windows help files.

Product Support

Product Support for Visual Help is available to registered users through the WinSIG Bulletin Board System and through Compuserve.   Please note Visual Help Pro Technical Support somewhere at the beginning of all your messages.

WinSIG BBS

(714) 363-9802   2400/9600/14400 N-8-1
Please direct your questions to the sysop by selecting 'C' for comments from the main menu.

Compuserve
