Project Doc V1.0

Introduction

Project Doc has been designed to help VB programmers working on many projects to have instant access to notes in each project. I use the notes to store a description of the project and on each function detail of what its purpose is, but you can use it any way you wish.

If you have any ideas to enhance this program I would be very pleased to receive them. I can be contacted by sending mail on Compuserve, user ID 100023,3177.

Using Project Doc

Project Doc is very simple to use, just open the required project and the program will load all files and their related functions (Sub and Function routines). With each function you may enter any useful detail.

By clicking on the Global Tab you can imediately see all global variables you have used for the selected file.

```
Important:The program currently does not read binary
files so please save all your project files into text
format.
```

Registration

To register the software please send a cheque or money order for 30 pounds to the following address:

```
The Software Factory UK Ltd
110 Peerless Drive
Harefield
Uxbridge
Middlesex
England
UB9 6JQ
```

The registered version has additional functions for printing out notes in a number of formats.
