MagicWB1.3

1.1 MagicWB1.3.guide

```
--------------------------------------------------------
MagicWB1.3 by Cléo Saulnier (Guide file by Trevor Morris)    21-03-95
--------------------------------------------------------
```

Just what all you OS1.3 people have been waiting for - MagicWB!
first to bring you this brillant programe ..SOFTWARE2000

    What the heck did I just download?
    How to get these goodies running?
    What did you use to make this thing?

    This is MAILWARE!
    Where you can reach me

    About MagicWB
    Disclaimer

This archive is freely distributable, BUT please have the courtesy to
distribute this archive with all of its files and documentation, as these
are intended to help the people who obtain this piece of software. Thanx!

Thanx for Magic Workbench, Martin Huttenloher - Register for MWB2.0 NOW!

1.2 What the heck did I just download?

What the heck did I just download?

MagicWB1.3 is a program which changes OS1.3 from 2 bitplanes (4 colors) to 3
bitplanes (8 colors) with the MagicWB palette preset so that you can use
Magic Workbench © by Martin Huttenloher on your A500 or A1000!!

This archive also includes the program PCheck which allows you to verify the

current number of bitplanes. This program can be used for any purpose and not
just to confirm that MagicWB1.3 is running.

IconFix1.3 and IconUnfix1.3 are small icon fixing utils which will make your
icons look like OS2+ icons.

Template is just a template pic which I got from another archive and have
been adding stuff to it as needed. The template drawer which I added to the
image has a dotted line around it to show where you need to cut it out for it
to work properly (cut just inside of the dotted line).

system-configuration is a pretty nice setup with a really nice mouse pointer
which you can copy into your devs drawer (make sure you back yours up or rename
it in case you don't like this one).

To enhance your MagicWB, look for MagicWBStuff3.lha on aminet in pix/icon!
This archive by Trevor Morris contains lots of pix, icons, and imagedrawers to
go with your MagicWB1.3!

Also grab up RomIcons1.lha through RomIcons7.lha created by Roman Patzner on
any Aminet site in pix/icon for the best looking icons created for MagicWB!

If you are not familiar with MagicWB, see the included Example.pic.

1.3   How do I get these goodies running?

How do I get these goodies running?

MagicWB1.3
PCheck
IconFix1.3
IconUnfix1.3
Example.pic & Template.pic

1.4   How do I get MagicWB1.3 running?

MagicWB1.3

Couldn't be simpler: just insert this command after the LOADWB command and before
the ENDCLI command in your startup-sequence. Now reboot the machine and
presto!

For example:

C:BlahBlah
.
.
.
LoadWB

```
C:MagicWB1.3
EndCLI
```

1.5   How do I get PCheck running?

```
PCheck
```

This one is even simpler: just open a CLI and type the command! That is it,
and PCheck will return the current screen name and tell you how many bitplanes
it is using.

For example:

```
9.System1.3:> df0:c/pcheck
Workbench has 3 bitplanes
```

1.6   What do I do with the Pictures?

```
Example.pic
```

Example.pic is just a snapshot of my WorkBench. You may show it
with your favorite viewer, or load it into DPaint.

```
Template.pic
```

The Template.pic is for making your own icons (use it in DPaint). Or,
you could download some VERY NICE premade ones by Trevor Morris and
Roman Patzner.

1.7   How do I get IconFix1.3 running?

```
IconFix1.3
```

Since OS2+ automatically adds a bevel to each icon, the ones you make using
the template will still look strange, as will the ones you download from
Trevor Morris and Roman Patzner...so you need IconFix1.3 and IconUnfix1.3!

IconFix1.3 will add the extra bevel to your icons for you automatically!! All
you have to do is specify the icon's name WITHOUT the ".info"

For example:

```
10.System1.3:> c:iconfix1.3 df0:utils/SID
```

This will add the bevelled edge to the SID icon "SID.info"

1.8   How do I get IconUnfix1.3 running?

```
IconUnfix1.3
```

IconUnfix1.3 is just the opposite of IconFix1.3, meaning that it will remove
the extra bevel on your icons (ie it will reverse the effects of IconFix1.3)
Just specify the icon's name WITHOUT the ".info"

For example:

11.System1.3:> c:iconunfix1.3 df0:utils/SID

This will remove the bevelled edge from the SID icon "SID.info"

1.9   What did you use to make all this stuff?

What did you use to make all this stuff?

The enclosed programs were coded by Cléo Saulnier using SAS/C® 6.51 on a
A3000/030 wih 14M RAM under OS3.0. Or, sometimes on a 10M A4000/040 under
OS3.1...so hopefully this works on everything (even though it's probably only
useful for those of you with a A500 or A1000).

The graphics and this guide file were done by Trevor Morris on the same
A3000 using OpalVision, Art Department Professional and Deluxe Paint.

1.10   This is MAILWARE!

This is MAILWARE!

What the hell is MAILWARE? Well, if you like and use this piece of software,
then you MUST send me some email. Even if it is just to say "Hey, I'm using
your program!" Comments, suggestions and bug reports are encouraged!

Suggestions, recommendations, requests...welcome!

Also, if you would like the source code for any of the included progs, no

problem! Just email me and request them!

WHAT OUT FOR BOOTSHOW – COMING TO AN AMINET SITE NEAR YOU!
Finally a boot-pic viewer that: ¤ Fades your pix in and out
                                  ¤ Allows random palette selection
                                  ¤ Allows random picture selection
                                  ¤ Runs as a background task
                                  ¤ Has definable display time
                                  ¤ AND remains as the frontmost screen!!

1.12 About MagicWB v2.0

About MagicWB v2.0

                              MagicWB v2.0
                              ============

The definitive WB-Enhancer no Amiga can do without. MagicWB is a full
replacement for the graphic user interface of the Workbench and has become
the standard on the Amiga.

MagicWB 2.0 is completely restructured on a new color-allocation scheme which
more than doubles the speed of the WB and reduces chip-consumption to only a
third compared with all previous versions and also features a highly improved
color palette. MWB 2.0 introduces a never-before-seen standard for over four
dozen of new image-drawers to achieve a more diversified look on your WB.
More icons, dock-brushes, a dozen of new patterns, fonts and a AA-support
complete this special product.

To get the 'real' look and feel of MagicWB, you should make sure that...

* ...you have set the MagicWB-Palette. Do this by clicking on the 'ClickFor
    Colors' icon.

* ...you have set the resolution of your Workbench to a aspect ratio near 3:4
    like 640x480, 800x600 or 1024x768.

The demo-version can be found on Aminet biz/demo/MagicWB20d.lha.

MagicWB is © by Martin Huttenloher.
