

## Conclusion:

In conclusion I would like to say the following :

Cracking is, as we have seen, not very difficult. The point is to find the heart of a protection routine, and understand how it works. If you do understand the how the protection works, you can defeat the protection. It is just a matter of time ;-)

Whatever program you are studying, keep the following working order in mind:

- Watching the program in action
- Disassembling the program and looking for familiar strings
- Finding and analyzing the protection routine of the program
- Modifying the program so it does the thing you want.
- Verify your crack!

Enjoy the tutorials. Send me a mail if you learnt anything from these tutorials or if you know ways to faster get the things done I explained in the tutorials.

Greetings,

Intern / The Exterminators
