HELLO, AND WELCOME TO MI-STOX (ver 1.1)

Look on the top line, and choose a stock.

Just remember to study the instructions before trying too much!

Steven Maller 70436,7145  
76 Moss St. San Francisco CA 94103

This program is for the sole purpose of examining what-if scenarios for a few stocks of the author's choosing. This program is not to be construed as any nature of recommendation, as the author is not registered with the SEC, and claims no ultimate responsibility for the use of this program.

Please feel free to modify it, but don't distribute it in modified form.

This program is made possible through the efforts of the Author, and is brought to you through the magic of

U N D E R W A R E (tm)

The New Age Distribution System

Simply stated, the system works like this:

- 1) You obtain this program through whatever means are at your disposal.
- 2) You wantonly copy and distribute this piece of work via all available media (floppy disks, telecommunication, fiber optics, ESP, etc.) to everyone you know.
- 3) Hopefully, the world is made a nicer place to live by your outward gestures of generosity towards those who are close to you.

That's It!

#### Instructions

Upon starting this program, one will notice some random stock information has already been entered. These stocks are hypothetical and were entered in the screens only as a means of demonstrating the capabilities of MI-STOX. If you are fairly experienced in 1-2-3, you will no doubt quickly figure out how to adapt the tables for your own information, and you can skip this paragraph. Others take note: I have

## Sheet1

written three macros to simplify the task of entering your PERSONAL stock data. To modify screen #1, simply press Ctrl-Break to get to the worksheet level, and press ALT-N. Then watch the top line for prompts. For screen #2, press ALT-O, and for screen #3, press ALT-P. This macro will automatically adjust the menu displays and the What-If Tables. Any more extensive modifications are NOT supported, and not recommended. Unfortunately, at this time this program is limited to tracking THREE stocks, along with one additional in the "Fill in the Blanks" screen. Good luck!

Be aware that the commission for purchase and sales of these stocks is based on a typical "discount" broker's schedule, which is calculated on a sliding scale:

\$0 to \$3000 - \$18 plus 1.2% of principal  
\$3000 to \$7000 - \$36 plus 0.6% of principal  
\$7000 and above - \$57 plus 0.3% of principal

If you have more than three stocks in your current portfolio, you can use the copy function to copy one whole screen of information down to an empty part of the worksheet, and all of the formulas should stay intact. However, as you might imagine, the menu and program structure could be altered to accomodate the additional stocks, although it isn't absolutely neccessary.

If for any reason you get lost in the program, simply press  
CONTROL-BREAK (or ctrl-scroll lock)  
and, when you want to resume the program's menu system, simply type  
ALT-Z  
from anywhere in the worksheet. GOOD LUCK!

Any more specific questions can be addressed to me via US Mail, or by Email (Compuserve ID 70436,7145). I will be more than happy to assist anyone in modifications, or simply further instructions on the most efficient use of MI-STOX in your particular circumstances...
