Using SPEEDUP.WK1 to Compare Standard and Optimal Recalculation

This worksheet contains 16 columns of formulas, twenty-five per cent of which contain a reference to one cell, the Input Cell. Use this worksheet to compare the recalculation times of Speedup's Standard and Optimal modes:

1. Select Standard from the menu. 1-2-3 displays the sample worksheet recalculates the entire worksheet, and records the time that transpired during the recalculation.
2. Press [Return] to display the Results screen which records the recalculation times and calculates the time difference between Standard and Optimal recalculation.
3. Select Optimal. 1-2-3 displays the sample worksheet, recalculates only those cells that contain formulas that depend on the Input Cell, and records the recalculation time.
4. Press [Return] to display the performance increase.
