It is possible to do limited text entry and editing in 1-2-3, but
it is not practical for sophisticated applications.   The format and
macros in WP.WKS will work for letters, notes, documentation, etc.
while still in 1-2-3, eliminating the necessity of changing programs
and possibly data disks. You can type until you hear a beep, then tell
1-2-3 to wrap around with the <ALT-W> command, which invokes a short
macro I created to save keystrokes when wrapping.

To start a new paragraph, <ALT-G> invokes a macro that wraps the
text but doesn't move the cursor, so you can start the next paragraph
where you want.

To go to the next page when newly entering text and the next page
is presumably blank, you use the command <ALT-P>, which moves over one
cell and up to the top row so entry can begin.

The macros and documentation are on page 2 (cell B1).

~/rj~{DOWN}{DOWN}{DOWN}{edit}

MACRO IN B1 JUSTIFIES PREVIOUSLY ENTERED TEXT AND SENDS 123 INTO EDIT.
MACRO B1=\W

~/rj~

MACRO IN B6 JUSTIFIES TEXT. THIS ALLOWS WRITER TO PLACE CURSOR FOR
FURTHER ENTRY.

~/rj~{right}{end}{up}

MACRO IN MACRO IN B11 JUSTIFIES FINAL ENTRY ON A PAGE AND MOVES TO THE
TOP OF THE NEXT PAGE IF IT IS BLANK.
