\g   {LET currcell,@CELLPOINTER("address")}
                {BigRight}{BigLeft}
                {LET leftcell,@CELLPOINTER("address")}
                {GOTO}{currcell}~

currcell B14

leftcell A14

\r   {GOTO}{leftcell}~
                {GOTO}{currcell}~

                This macro lets you Go anywhere on your spreadsheet and then
                Return to the same cell. I cannot figure out a way to return
                you to the same exact window but at least this returns you
                to the same cell with the same column relationship.

                To use this procedure invoke the "g" macro, Press and hold the
                Macro key (Alt on most computers) and press the "g" key
                before you go elsewhere on you spread sheet. This will let
                the macro save your current location. Then to return invoke
                the "r" macro.

                If you combined this with another spreadsheet you will have to
                name the column to the right of the \g. To do this place the
                cursor on the \g and press slash (/), Range (R), Name (N),
                Lables (L), Right (R), Page Down and Enter. This will name the
                column to the right of the \g with the names in the column
                with the names under the \g.
