```
\l        {getlabel "Enter the symbol: ",under}
          @repeat(under,@cellpointer("width")-1)
          {calc}{home}'~

under  %
```

This macro will repeat a symbol of your choice one less
time then the width of the column. It is very useful for putting
a line under a column of numbers to be added.

To invoke the macro hold down the macro key (Alt on most
computers) and press the "l" key.

If you combined this with another spreadsheet you will have to
name the column to the right of the \l. To do this place the
cursor on the \l and press slash (/), Range (R), Name (N),
Lables (L), Right (R), Page Down and Enter. This will name the
column to the right of the \l with the names in the column
with the \l.
