How wide is your spread sheet? How wide should you set the
margins so the spread sheet will print correctly? This macro
will tell you. Simply place the cursor in the left column of
your print range, invoke the macro, and press enter until you
are in the right column. The total width will be displayed in
the indicator in the upper right corner of the screen. When
finished press control break to stop the macro.

To invoke the macro hold down the macro key (Alt on most
computers) and press the "w" key.

If you combined this with another spreadsheet you will have to
name the column to the right of the \w. To do this place the
cursor on the \w and press slash (/), Range (R), Name (N),
Lables (L), Right (R), Page Down and Enter. This will name the
column to the right of the \w with the names in the column
with the \w.
