

Introducing SubClass-EZ *from Jeff Simms*

An inexpensive way to enhance your Visual Basic programming experience.
Allows you easy access to the message queue of *any form or control*.

The SubClass-EZ control permits detection and modification of window messages, their parameters and return value.

Uses for SubClass-EZ:

- * Add new events to controls and forms.
- * Make your own owner draw controls.
- * As a learning and experimentation tool.
- * Plus many more!

Easy To Use:

Here is the code needed to subclass a command button, for example:

```
SubClass1.HwndParam = cmdToolButton.hWnd
```

Note: You can subclass any number of forms and controls (up to 500) with just one SubClass-EZ control.

Inexpensive: The SubClass-EZ control is available for \$6.50. It can be ordered on CompuServe, GO SWREG (reg. ID #622) or by mail.

About the author: Jeff Simms is a frequent contributor to the MSBASIC forum on CompuServe. He is always looking for new ways to improve the VB programming experience. One of his discoveries, the VBWrite technique, was recently covered in BasicPro magazine.

Important please note: SUBEZD.ZIP contains four files. Due to an authentication routine, the three files below must be present in the same directory and AUTH.DLL must be in your path for the demo control to load.

| | |
