

PREFACE

As we become more and more an information-oriented society, flash memory products have come to play a major role in advanced electronics, computer, and communication equipment industries. In particular, an uprising array of mobile personal data instruments never perform better without the advantages of flash memories. Not only multimedia and network equipment but home appliances are added with some intelligence because of our flash memories. Along with increase in the importance of the information processing in our lives, we are faced with a growing demand for flash memory products using the most advanced technology.

To keep pace with this rapid progress, we at Sharp will continue to direct our efforts at understanding the crucial trends of the moment in this area and supply our customers with products that truly meet their needs. In short, to contribute to a better life for all of us in this age of expanding technology.

Sharp has developed a wide range of flash memory units including Smartvoltage flash memories, fast programming flash memories, dual work flash memories, etc. for use in numerous areas of application. Sharp flash memory units are used extensively in mobile communication and hand-held equipment personal computers, digital cameras for data and code storage.

This data book has been especially compiled for the use of our customers. Listed here is the major flash memory products developed and manufactured by Sharp, with detailed explanations of their many functions and outstanding features. We hope that you find this book useful in determining which Sharp products are best suited to your needs. Please contact us directly if you have any further questions.
