About MSI

Mustang Software, Inc. offers a range of products for your telecommunication needs. All these products are available through your usual retail and mail order channels.

Wildcat! BBS

Since Mustang Software, Inc. first introduced *Wildcat!* in 1986, it has grown to become the world's best selling Bulletin Board System (BBS) software.

Much of this success is due to *Wildcat!*'s flexibility and economy. Four versions of *Wildcat!* provide the power and features you need, from an economical single-line installation to a sophisticated LAN-capable multi-user system.

Wildcat! Single-Line is an inexpensive solution for those wishing to begin with a single telephone line and modem. Lower price doesn't mean lack of power with *Wildcat!* Single-Line. In fact, with the exception of multi-user chat, *Wildcat!* Single-Line contains exactly the same features as our Multi-Line, Professional and IM versions.

Wildcat! Multi-Line supports up to ten concurrent users in any combination of LAN or modem connections. Up to four telephone lines can be connected to a single computer using DESQview, while connecting multiple PCs to a Local Area Network provides for up to 10 simultaneous connections. Except for the number of concurrent users it supports, *Wildcat!* Multi-Line has all the features and functions of *Wildcat!* Professional.

Wildcat! Professional has all the features of *Wildcat!* Multi-Line, but supports up to 250 concurrent users by connecting multiple PCs to a Local Area Network. Up to four telephone lines are supported on a single PC using DESQview and *Wildcat!* Professional.

Wildcat! IM (Intelligent Multi-Port) was the first BBS software to offer DigiCHANNEL support. Using *Wildcat!* IM, you can support up to eight telephone lines on one computer and up to 250 total concurrent users via a LAN.

wcPRO -- The PRO! Series Utilities

This integrated utility program offers extended database processing and graphic analysis to the BBS sysop. It is used to manipulate and evaluate many areas of BBS operation. The series includes packages for *Wildcat!* database management, LAN node monitoring, and a Fax-on-demand system for your BBS.

wcMHS -- Netware MHS gateway for Wildcat! BBS

This gateway is designed to work with Novell's Message Handling Service (MHS). It allows *Wildcat!* BBS messages to be redirected to any other MHS compatible application. *wcMHS* can also be used to link *Wildcat!* BBSs together, echoing messages via MHS direct or through the CompuServe MHS Store and Forward Hub.

wcUUCP -- Internet E-Mail and Newsgroup gateway for Wildcat! BBS

The latest addition to the *Wildcat!* family sends and delivers E-Mail and Newsgroup mail between your *Wildcat!* BBS and your UUCP host. Get into the fast lane on the electronic data highway, and start talking to the world!

QmodemPro for DOS

For more than nine years the DOS version of *Qmodem* has been the first choice of well over a quarter of a million pioneering communication enthusiasts worldwide.

The latest release of Qmodem, *QmodemPro for DOS,* is available in a package designed for you -- whether you're just discovering the on-line community, or you're a discriminating power user who demands a high performance, thoroughly professional package.

Off-Line Xpress

.QWK-compatible mail packet reader for Tomcat, QMail, and more. Reading mail from BBSs has never been easier. OLX can read packets generated by any .QWK compatible mail door used by most BBS, and generates reply packets in the .QWK format which can be uploaded back to the originating BBS. Included FREE with *QmodemPro for DOS,* or available separately for only $40.
