Formula One/VBX - Demonstration

Unzip and place all of the files in c:\f1demo. This demonstration program requires vbrun300.dll and does not allow the control to be used at design time.

Contact VisualTools, Inc. at 800-884-8665 or CIS 72204,3521 for further technical information and for prices and special promotions.

───

Formula One is a high performance spreadsheet control that allows you to create, manipulate and print worksheets. It contains the tools needed to store, analyze, manipulate, and present your data. Its major features include:

Microsoft Excel Compatible. Formula One reads and writes Microsoft Excel 4.0 compatible worksheets. Developers can create applications that share information with all major Windows applications.

Database Access. Formula One can also function as a bound control, allowing connection to Access databases.

Multiple Worksheets. With Formula One, you can work with multiple worksheets simultaneously.

Drag-and-Drop. Formula One allows you to move and copy data in ranges by dragging ranges.

Superior Data Formatting. Excel-style custom formatting is supported, allowing unlimited formatting options.

Worksheet Designer. The Worksheet Designer is an interactive program that allows you to design and format the worksheet for your application by pointing and clicking, and choosing format commands from menus.

Ease of Use. Formula One has many features that make it one of the easiest data aware controls to use, including built-in dialog boxes for your applications, the complete documentation available through on-line help, and endless flexibility for customizing the control.
