

Installation Guide for Win Change

Copyright © 1993 JRE Enterprises, All Rights Reserved

Win Change requires Windows 3.1 and VBRUN300.DLL. VBRUN300.DLL must be accessible via the path, normally it is found in the \WINDOWS\SYSTEM directory.

To install Win Change, run SETUP.EXE. If you are using a windows shell program other than Program Manager or Norton Desktop, you will have to manually create groups and group items for Win Change. We recommend creating a group Win Change. In group Win Change, create two items:

1. Description = Win Change
Command Line = *path*\WCHG.EXE
Working Directory = *path*
2. Description = Win Change Help
Command Line = *path*\WCHG.HLP
Working Directory = *path*

NOTE: *path* represents the disk and directory where Win Change was installed.

Warning: Certain types of files contain internal checksums. If these files are changed with Win Change, they may become invalid. Norton Desktop for Windows QAG files and Program Manager GRP files are two examples of files that have internal checksums. Win Change handles GRP files and will update their internal checksum. QAG files should NOT be changed using Win Change as their internal checksum is not updated by Win Change. Always create back out files when changing non-INI/GRP/PIF files.

KNOWN PROBLEMS:

GP fault occurs when run on a 286 machine. Problem is due to a bug in VBRUN300.DLL. You must use VBRUN300.DLL dated 5/12/93 or later to fix this problem.

An "Invalid File Format" error may occur when starting WCHG.EXE. Certain older versions of the following file(s) are incompatible with Visual Basic Version 3.0:

CMDIALOG.VBX

These file(s) are supposed to reside in the windows system directory. Other products may have installed these file(s) in the windows directory or elsewhere. Scan all directories for these file(s) and eliminate any occurrence of these file(s) outside of the \WINDOWS\SYSTEM directory. Make sure the file(s) in the \WINDOWS\SYSTEM directory are the ones shipped with Win Change or NEWER. Visual Basic file formats were changed between Version 1.0, Version 2.0 and Version 3.0. This is NOT a problem with Win Change, but is an incompatibility between Visual Basic 1.0/2.0 VBX files and Visual Basic 3.0 VBX files.

WHAT's NEW V2.3:

Improved form resize routines. Removed "stutter" effect when in video mode > 800x600.

WHAT's NEW V2.2:

Documentation corrections.

WHAT's NEW V2.1:

Two new functions added -- (1) Find Text within Files, and (2) Find Files by File Type.
Quick access keys added.

WHAT's NEW V1.4:

Selected files that meet change criteria can be browsed, edited, copied, moved, or deleted.
Error handling has been improved.
New SETUP.EXE from Microsoft included, which corrects many install problems.

WHAT's NEW V1.3:

Corrected window positioning problem that could occur with a video mode change.
HELP has been enhanced.

WHAT's NEW V1.2:

Corrected "Invalid Property Value" problem.

WHAT's NEW V1.1:

Corrected problem where search strings were not found or replaced in files with a size greater than 4096 bytes.

Added ability to do case-sensitive searches.

Also available from JRE Enterprises are programs JRE Exit, JRE Home Inventory and Win Multiple Configurations. JRE Exit is a freeware utility that provides four different ways to exit Windows. JRE Home Inventory is the Windows Home Inventory program that keeps track of all your household items for insurance purposes. Win Multiple Configurations is the only utility that allows up to eight different Windows configurations to be saved and restored! These programs can be found on CompuServe (WINSHARE forum) and America Online (Windows software) with a keyword of JRE.

JRE Enterprises can be contacted on CompuServe via mail to ID 71162,2311 or contacted on America Online via mail to ID Leel641756.
