

Olaf Heß (Hess for those who don't speak German)

CompuServe: 100 031, 35 36

**WinMap V1.1** copyright © 1993 by Olaf Heß

WinMap is a Windows 3.1 utility that displays how much memory the various programs, fonts and drivers that are in memory use. WinMap distinguishes between two types of memory: *discardable* and *fixed*. Memory that's marked as being *discardable* can be freed and used by other applications if Windows runs out of memory. Memory that is marked as *fixed* cannot be freed if memory is low.

If you click on one of the items in the listbox a dialog box pops up that tells you what the filename of this item is and how many programs are currently using this file (in the case of DLLs or programs with multiple running instances).

If you want to save the current WinMap-list to a file select the *Save list* menu entry from the system menu.

To install the program simply copy the file WINMAP.EXE onto your harddisk.

If you have any problems with the software or if you encounter bugs please contact me (CompuServe preferred).

#### **History:**

V1.0 (08/93): Initial release.

V1.1 (12/93): Added support for CTL3D.DLL (still runs without this DLL) and the *Save list to file* feature.

#### **ETC:**

This program is neither FREE- nor SHAREWARE. I regard it as being **CAREWARE**. If you like it and want to use it that's fine. You don't have to pay anything to me and the program won't bother you with any nag screens or reminders to pay some money to me or anything.

**CAREWARE:** This program is CAREWARE, meaning that if you like it please donate some dollars or pound or mark or whatever currency to people in need. After all, if you have the financial resources to use CompuServe or a Shareware dealer to get this program you might also have some money left for people who really need it (did you really need this piece of software?).

Writing software takes a lot of time, effort, and money. Please respect this. (Apart from that it's really fun!)

WinMap was written using Borland Pascal 7.0, from my point of view the best tool for this job. If you would like the source code (fully commented in German) please send me a CompuServe mail to my CompuServe account 100 031, 35 36 or to my address given above (CompuServe preferred) and we can discuss the details (I basically want to cover my expenses for postage and packing).

This software is copyright © 1993 by Olaf Hess. WinMap may be used and distributed freely, subject to the condition that no charge is made (a small fee for media and handling is permissible). Distribution with the intend of mass production requires the written permission of the copyright holder.

And now, to keep the lawyers (and me) happy:
