

## Clip Library

The Clip Library is a floating palette containing text strings that may be inserted into your document after the current insertion point, merely by clicking once on the desired text. Menu commands from the Edit menu allow you to add items to the Clip Library. To add, delete or edit current items in the Clip Library, go to the Libraries Preferences section of the Preferences card.

The Edit menu (on the menubar) contains:

Cut to Clip Library

Deletes the selected text after placing a copy of it in the Text Library.

Copy to Clip Library

Places a copy of the selected text in the Text Library.

Edit Clip Library...

Displays the Preferences card, opening the Libraries Preferences section. Each line in the Clip Library becomes a clickable item. To enter a return character in the Clip Library without creating a new item, type the string “\r”.

Back to Info Window, on to Command Keys, or return to HTML.edit Features.
