

## *The wizard steps*

We have not included the wizard steps descriptions in this help file, but in the tutorial. So to learn how using the wizard and its steps, you have to run it.

Click on the following button to start the tutorial :

{button Run the tutorial,EF('tutorial.exe','2',1)}

---

**You must have a web browser** such as Microsoft Internet Explorer ® or Netscape Navigator ®.

Visit the G.D.G. softwares site.

## *What is HTML Executable ?*

{button See also,PI(`',`v1')} {button Tutorial,EF(`tutorial.exe',`2',1)}

---

HTMLExe Wizard compiles an HTML Executable with all your web pages. All HTML files, sounds, video, images, text and binary files can be included.

These files are compressed with ZIP technology and the wizard creates a single file executable.

When the user run the HTML Executable, it creates a temporary directory where it extracts all files. After that, it run the web explorer of the user to show your web pages. Finally, all temporary files are deleted when the user closes his web browser.

HTML Executable can be used for tutorials, presentations, electronic manuals, newspaper... And all HTML and Java possibilities are preserved because HTML Executables use the web browsers.

In this version, some functions are available. [Click here to see the options.](#)

In futures versions, HTML Executable will be able to register ActiveX controls, display licences before the use...

Visit the G.D.G. softwares site.

### HTML Executable options

{button See also,PI('`v2')}\quad {button Tutorial,EF('tutorial.exe','2',1)}

In this first version, HTML Executables have these features :

- Title of the HTML Executable dialogs.
- Confirmation prompt.
- Initialization text.
- Password protection.
- Zip technology compression included.
- Default web page selection.
- End message.

You can modify all these options to create your own HTML Executables.

Visit the G.D.G. softwares site.

## *HTMLExe Wizard projects*

{button See also,PI(`',`v3')}\n {button Tutorial,EF(`tutorial.exe',`2',1)}

---

The HTMLExe Wizard projects have the .HEP extension. They contain all information about your HTML executable. To load an existing project in the first step, click on the button "...\" and select the file. The steps will be completed with the settings placed into the project. So you can create immediately your HTML Executable without re completing the steps.

To save a project, click on the button named "Save a project". It is placed in the step number 8. A dialog will be displayed : you can save your project for reuse another time.

HTMLExe Wizard projects are text format. You can view them with a text editor such as Windows Notepad. But it is not recommended to modify the settings outside the wizard.

Visit the G.D.G. softwares site.

## *Bugs found in the wizard*

If you have found bugs, errors, problems in the software, please report all them to the team of the G.D.G. softwares :

E-Mail : [gdg\\_softwares@hotmail.com](mailto:gdg_softwares@hotmail.com)

**Warning :** a new version of HTMLExe Wizard could be created (which can correct all bugs). Verify that you have the most recent version of the software before sending us your bugs report.
