

Here are a few steps how to dupe items in Diablo (v1.00 and v1.02) :

Drop the item you want to be dupped.

Take one piece of gold and store it in an empty inventory-slot.

Walk a few steps away from the dropped item.

Close the inventory.

Now comes the tricky part ;-)

Click on the dropped item to take it.

While you're walking to it, open the inventory and place the pointer over this one piece of gold.

Now you must click on this one piece of gold in the same moment when your character takes the dropped item (it's a little bit tricky but just try it a few times!!!).

When you click in the right moment then the piece of gold changes into the same item you dropped before, but you must drop this new item first to see the right graphic instead of the gold-graphic.

That's all! =8-)
