

# *FinderXtender v1.7.3*

## About FinderXtender ...

Thanks for using FinderXtender. FinderXtender is a System Extension for the Finder 7. It gives powerful folder management function to your Finder. You can directly open specific folder or System related folders without opening multiple windows. FinderXtender universal launcher can open any kinds of Application, Deskaccessary, Control Panel and Documents.

Enjoy !!

# Closing All Finder Windows

To close all Finder windows, choose "Close All" from the FinderXtender menu.

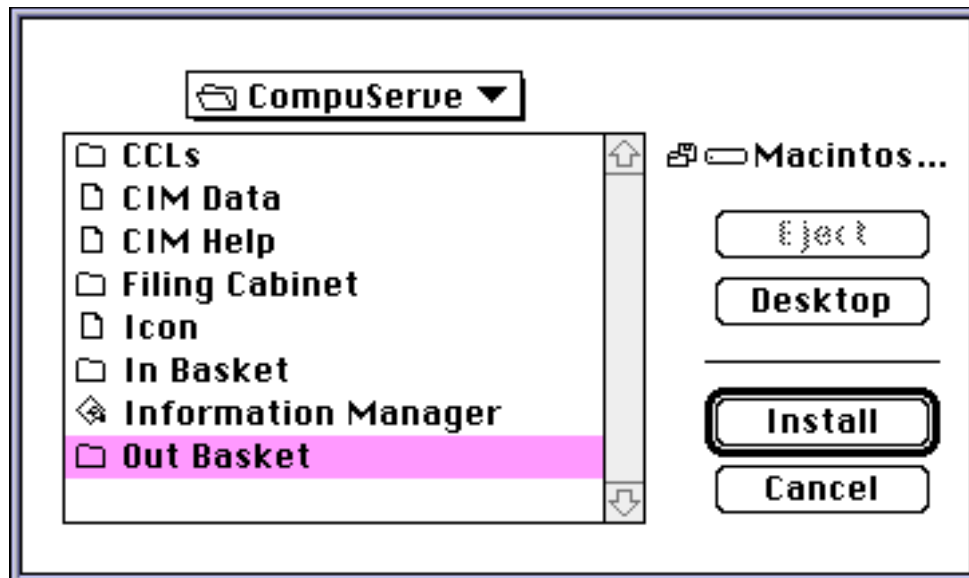

# Universal Opener

To open Applications, DAs, ControlPanels or Documents, choose opener... from the FinderXtender menu. A standard file dialog box may appear. Double-clicking the name of an application, DAs or Control Panel in the list launch it. If you want to open a folder, choose the name of the folder and press "Open it" button.

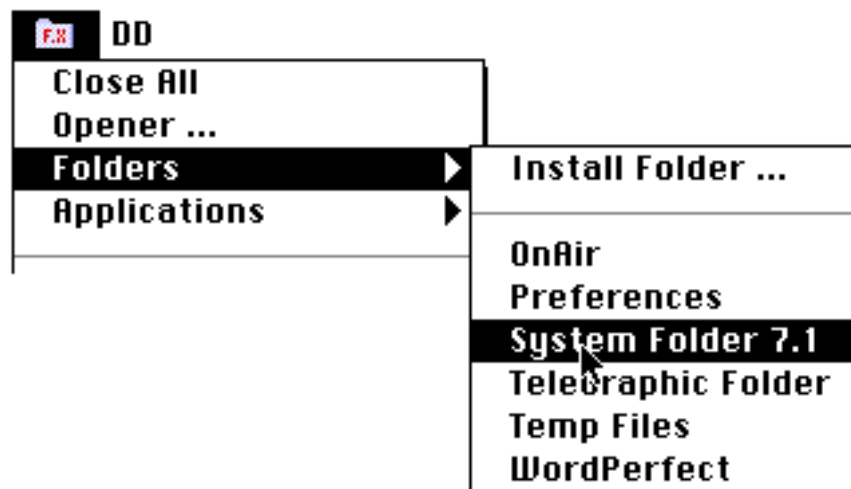

# Instant Folder Opener

To install folders, choose "Install it" from the Folder item submenu. A standard file dialog box may appear. Click the name of the folder you want. Click the "Install" button to install the folder in the submenu.

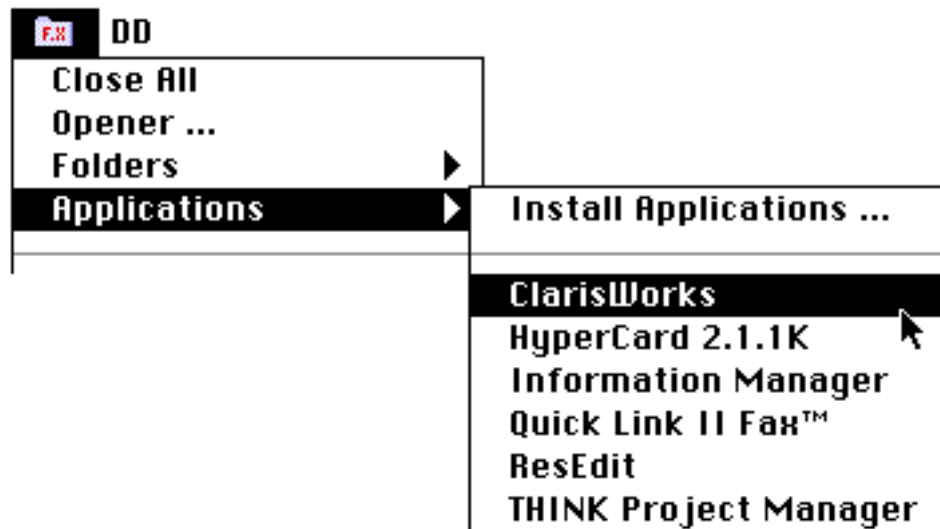

To open installed folder, choose folder name from the Folder item submenu or pressed popup menu modifiers keys and press mouse button (See FinderXtender Preference).

To remove installed folder, choose folder name while press Option key.

## Instant Application Opener

To install application programs or Deskaccessaries, choose "Install Application..." from the "Applications" item submenu. A standard file dialog box may appear. Click the name of the application or DA you want. Click the "Install" button to install the folder in the submenu.

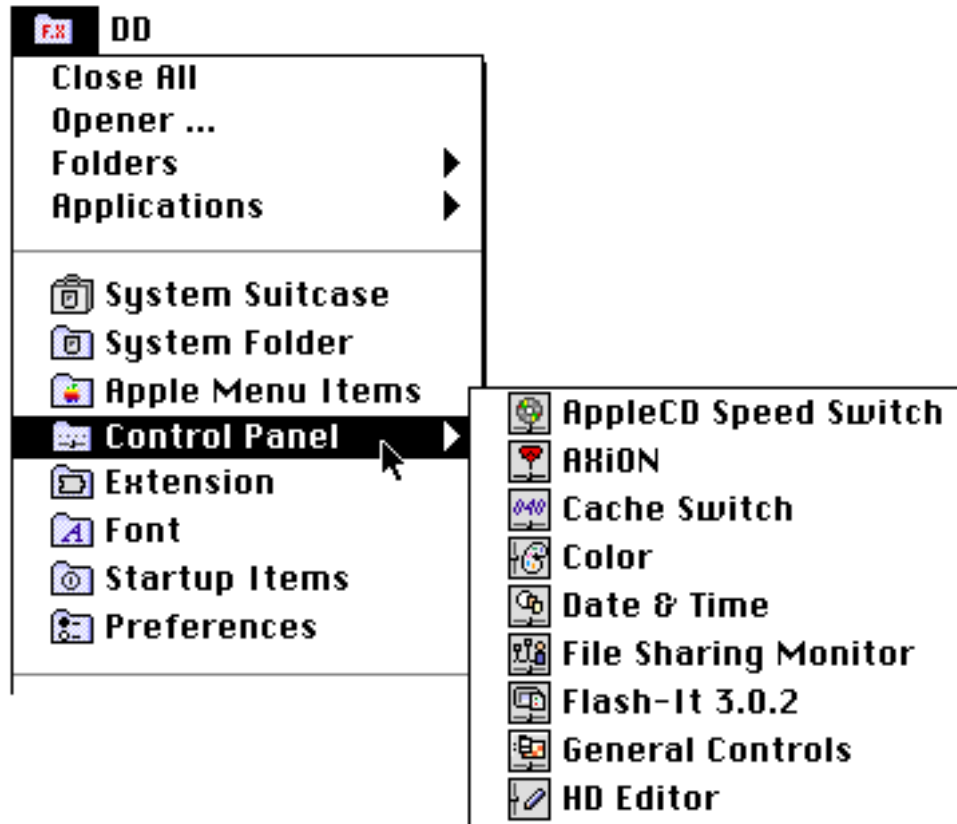

To open installed applications, choose folder name from the Application item submenu or pressed popup menu modifiers keys and press mouse button (See FinderXtender Preference).

## Open System related folders

To open System suitcase, choose "System suitcase" from the FinderXtender menu. To choose System related folders, choose System Folder, Apple Menu Items, Control Panel, Extensions, Fonts, Startup Items or Preferences from the FinderXtender menu.

## Open Control Panel files

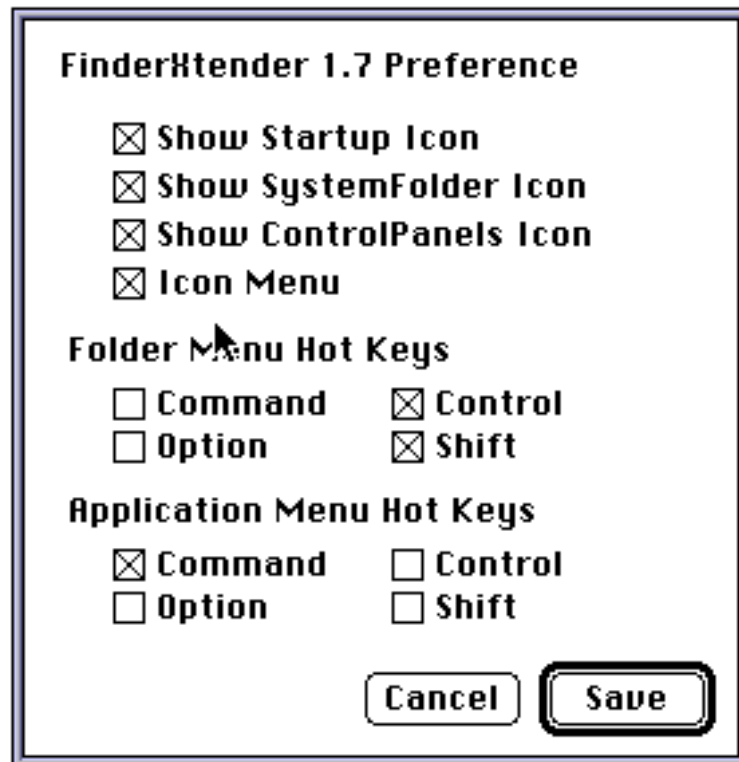

To open Control Panel file, choose Control Panel item from the Control Panel submenu.

## Select Finder Window

To select opened Finder window, choose window name from the FinderXtender menu. The selected window may appear in front of other windows.

## FinderXtender Preference

If you want to change default settings, choose "Preference..." from the FinderXtender menu. A preference dialog box may appear. The change takes effect when the Macintosh restarts except modifier key settings.
