

Address Book 3.7

Address Book is an easy-to-use, yet fast and powerful way to provide you with complete management and control of lists of names, addresses, and phone numbers. It consists of both an Application and a Desk Accessory (DA), and it works on Macintosh computers from the Mac Plus to the latest PowerMacs. Many of its features have been added as a result of users' requests. Address Book has so many features, it is unlikely that you will use them all.

Among Address Book's features:

- preset fields for easy set-up and data entering
- memory-resident list for fast finding and sorting
- multiple sort capabilities
- import utilities allow importing from other databases, word processing programs, and Personal Information Managers
- exporting to mail merge, databases, word processors, and spreadsheets
- exporting to palmtop computers, including Newton, Psion 3a, Sharp Wizard, and Hp95LX
- powerful print functions for envelopes, labels, business cards, postcards, Rolodex, standard and custom address books, and lists
- color printing
- prints postal bar codes
- phone dialing through modems, the Mac speaker, Hyperdialer™, and Desktop Dialer™
- log file for logging calls, taking notes
- call timer
- macros
- on-line help
- multiple language capability
- regular updates available on CompuServe, America Online, eWorld, and direct (see Ordering and Order Form at the end of this document)
- telephone, fax, and email support for registered users
