NuFile:The missing "New File" contextual menu.

NuFile is a contextual menu plugin. It adds a new file menu when you right click at a folder(ie: desktop or Finder background). If you use this program frequently, please consider making a donation.

1.8 , Copyright © Piti Ongmongkolkul

This package will install the following items:
-NuFile.prefpane at /Library/PreferencePanes
-NuFile.plugin at /Library/Contextual Menu Items

Warning: This package will restart the finder at the end of installation process.

Feature:
-Add the "New File" to the contextual menu.
-Drag and Drop your own templates via the preference pane.
-Open the file right after the creation(on by default. turn it off at the preference pane). And the program that will be used to open the new file is the same as the default program of the original template.
-Edit your templates from the preference pane

For more information on how to customize it please go to
http://www.growlichat.com/NuFile.php#custom

Version History

Version 1.8
-Bug Fix/Feature: Now the created file retains all file type and creator code. Plus all resource fork. That is what ever setting your have one the original template file (ex: default program to open that file) will get copied to the new file. (Requested by chleuasme and caught by Dan Frakes)
-Bug Fix: The author name of the default Microsoft Office documents is now blank. (Thanks Anon for his suggestions)
-Feature: Add an edit button. So that users can edit their template directly from the preference pane.(Requested by chleuasme)

Version 1.7
-Feature: Add bundle resources support. Ex: Keynote , Pages etc.

Version 1.6
-Bug Fix: blank preference pane in Panther and earlier version of OS X(Thanks nuffsad and MartinK)

Version 1.5
-Feature: Add Drag and Drop in the preference. So, now it's much easier add a template. Just drag from Finder and drop it in the table.
-Feature: RTF is now in the default setting. If have older version and you want to use the new default setting you have to issue the following command at the terminal(without quotes and note that it's case-sensitive): 'default delete com.tee.NuFile'. All your preferences will be reset to the new Default.(As requested by Pete and an anonymous guest)
-Feature: Open file after creation. It's on by default. Turn it off at the preference pane. (As requested by Pete)
-Feature: Installer no longer requires log off. It'll restart Finder though.(As requested by Garoo)
-Please make a donation to get the secret of NuFile (aka. easter egg) :)

Version 1.4
-Helper App is now a preference pane.
-A little larger table.

Version 1.3beta
-Add a minimal app to add/change templates
-Still, it does NOT support iWork
-If you right click and the file doesn't show up, check console.app.

Version 1.2
-Add New Word Document
-Add New JAVA File
-Add New PHP Document
-Add New Excel Document
-Add New Powerpoint Document
-Add New Word Notebook
-Fix Some texts(Thanks to ELIASHC)
-Sorry for Pages and Keynote fan. It's a little different story for these two.

Version 1.1
-Fix bug for path with spaces
-Fix bug that creates a break line in safari

Version 1.0(initial Release)
- New text file(blank)
- New Html file(with header and footer)
- New TEX file(using the template I usually use for taking notes)
