Installing Mail Plugin and Rules

JunkMatcher will now install the necessary Mail plugin and Mail rules for you after you click on "Continue" button. Please make sure you quit Mail.app before clicking the button.

For users of JunkMatcher version 1.19c or earlier: **this version is *not* compatible with 1.19c or earlier**. After this step, your old patterns will be moved to this folder
Old JunkMatcher Patterns

on your Desktop. Inside the folder you will find a bunch of .html files. Use your browser to open each of them, and follow the instructions inside to reproduce these patterns in the new JunkMatcher.app. Also don't forget to remove the old **JunkMatcher Central.app** and the old **checkSites.py** (if you added it to your cron table before).
