

BTServer

Copyright (c) 1995-1996 WinCorp Consulting

BTServer is an OLE Automation Server that reads and writes Btrieve files. Each Btrieve file is treated as an OLE object: Properties describe the Btrieve file and Methods navigate the Btrieve file. BTServer was written in Visual Basic using WinCorp's Visual Basic 4.0 Classes for Btrieve. Try accessing BTServer from VB4, Excel or any other application that supports VBA and OLE.

Samples

BTDemo.vbp

Visual Basic program to browse Btrieve data files. Demonstrates how easy it is to read native Btrieve files and Btrieve files defined in file.ddf.

BTServer.xls

Excel VBA code to display the contents of a Btrieve file in an Excel grid.

Sample VB Code

```
*****
*
*
'*  Open a Btrieve file and read all records
'*
'*  Be sure to select "WinCorp Btrieve OLE Server Demo" from the VB Tools|References menu '*'
prior to accessing BTServer.
'*
*****
*

Dim btr as New clsBtrv                                'create the Btrieve file Object

btr.btOpen "Btrieve File Name", "c:\path2ddf"          'open the Btrieve file object using DDF files
btr.MoveFirst                                          'move to first record
Do While Not btr.EOF                                  'spin through all records in the file
    msgBox btr.fld(0)                                  'show first field in the record
    btr.MoveNext                                      'move to next record
Loop
btr.btClose                                           'close the Btrieve file
