FSSocket Features

Ease of use
FSSocket provides a set of properties and events that allow you to configure and control a network connection.   Setting up a connection is as simple as:
```
    FSSocket1.PortNumber = 7
    FSSocket1.HostAddress = "123.456.44.99"
    FSSocket1.Connected = TRUE
    FSSocket1.Send = "Data to send"
```
Setting up a server connection is even easier:
```
    FSSocket1.ListenPort = portnumber
    FSSocket1.Listen = TRUE
```

Asynchronous operation
Once the connection is made, FSSocket uses only the asynchronous winsock calls.

Multiple Protocol Support
FSSocket supports both TCP and UDP protocols.
