## OVERVIEW

KopyKat was created to ease the function of applying the same code to multiple control/event combinations, such as:

- Calling a routine to highlight text for all text boxes/gotfocus events.
- Applying general error processing code to all major code routines.
- Calling the Centerform routine for all Form\_Load events.
- Insert a standard comment block for all desired control/events.

KopyKat enables you to type in code one time and have the code applied to a specific event for all selected controls in the project at one time.

KopyKat displays the available files and controls for the current project. When a new project is opened, KopyKat automatically detects the change and displays the new project.

## **Add KopyKat to my VB add-in menu?**

From the Visual Basic Add-Ins menu, select Add-In Manager.

The Add-In Manager will display a list of the available add-ins to choose from. If you do not see KopyKat.clsAddIn here, you will need to execute KopyKat.exe and then try again.

Select KopyKat.clsAddIn and click OK. When you click on the Add-Ins menu option now, you should see a submenu for KopyKat.

To run KopyKat, click on the KopyKat submenu.

## Apply code to an event for multiple controls?

1. You can select one of the following in the Objects listing:
  - one or more form or file level objects OR
  - one or more controls (this can span across multiple forms)(You may not apply code to forms and controls at the same time.)
2. Select ONE event.
3. Type in the desired code - using Control+Enter to go to the next line and Control+Tab to tab to the next stop.
4. Click on the Apply toolbar button  OR  
select the Code/Apply Now menu options.

## **Add new controls to KopyKats Object listing?**

KopyKat automatically detects all controls and menu items for a form.

## Add new events to KopyKats Event listing?

1. Click on the Add Event menu button , or select the Events/Add menu options.
2. A dialog will be displayed to allow entry of the new event name. Type in the name and click on OK.

The new event will be immediately added to the event listing.

## **Delete an event from KopyKats Event listing?**

1. Highlight the event in the Event listing that you would like to remove.
2. Select the Events/Delete menu options.

The selected event will be immediately deleted from the event listing and will not appear again when KopyKat is restarted.

## **Apply code to the top or bottom of an event?**

You can tell KopyKat where in the specified event to position the application of the code - at the top or at the bottom of the event. For example, you would want KopyKat to apply the code to the *top* of the event if you were applying an On Error statement for the event. You would want KopyKat to apply the code to the *bottom* of the event if you were applying the Exit Sub and the Error block associated with the On Error statement.

To tell KopyKat which position to apply the code to, click on the Options/ApplyToTop to apply the code to the Top of the event or the Options/ApplyToBottom to apply the code to the bottom of the event.

To have KopyKat prompt you each time you select the Apply command, select Options/Show Selection screen.

## **Request to be prompted before the Delete**

To be prompted Before an event is deleted, select Options/Prompt/Before Delete menu option.

## Expand or Collapse the Object listing?

You may determine the way you view the Object listing - whether by viewing the expanded list of all files and controls or to view only the high level forms and files. To specify, select the Object/Expand menu option or Object /Collapse menu option or click on the Expand/Collapse toolbar button.

## **Deselect selected objects in the Object listing?**

To reset the selections in the Object listing, select the View/Clear menu options or click on the Clear toolbar button.

## Exit KopyKat?

Select the File/Exit menu options or click on the Exit toolbar button.

## Register KopyKat?

The cost of KopyKat is \$23. You may register via Compuserve using GO SWREG and product name KOPYKAT.

OR

mail to :       KopyKat Registration  
                  smapps  
                  Terre & Michael Wells  
                  1901 Winners Circle  
                  Lawrenceville, GA   30243

If you are registering by mail, please be sure to include your email address if you have one for faster service.

## Obtain technical support for KopyKat?

Technical support will be available to all registered users via email (102432.357@compuserve.com) or mail your request to the [address](#) listed in the registration information.
